

第五十五屆全國技能競賽 青少年組商務軟體設計職類 競賽試題暨評分彙總表

競賽試題暨評分項目

☐ 商用軟體設計一 Software Design 1	☒ 商用軟體設計二 Software Design 2
---	--

選 手 編 號：_____

崗 位 編 號：_____

選 手 姓 名：_____

總 分：_____

評 分 老 師：_____

1. Create System Analysis Diagram

- Please use **Microsoft Visio** to create an **Activity Diagram**.
- The theme should cover **all operation functions of this system**, including the following three key functions:
 - System Login/Logout
 - Account Registration
 - Vehicle Query

2. Prepare Presentation

- Please use **Microsoft PowerPoint** to create the presentation.
- The presentation should be from the perspective of a **system development engineer**.
- Content to cover:
 - System functions
 - Workflow/processes
 - Design concepts
 - Creativity, etc.
- The presentation should be **no more than 10 slides** in total.
- The presentation environment and the text content should be **in English**.
- The spoken presentation language is flexible (no strict requirement).
- Presentation time is scheduled between **13:00 to 14:00**, with each contestant presenting according to their job position number.
- Presentation time is **5 minutes** per contestant.

	Description	Mark	Value
(1)	Activity Diagram for Login/Logout Function 1. Filename Correctness (1 point) • Ensure the filename matches the content and theme, e.g., LoginLogout_ActivityDiagram.vsdX. • Follow the naming conventions specified by the project or instructor. 2. Start and End Nodes (2 points) • The Start Node should be a solid black circle (●). • The End Node should be a circle with a black dot inside (●). • Confirm that there is exactly one start node and at least one end node clearly shown. 3. Activities and Control Flows (2 points) • Each activity (action) should be clearly labeled and logically placed. • Use arrows to correctly connect activities in the sequence of flow. • Example activities: ○ Enter Username and Password ○ Validate Credentials ○ Display Error Message ○ Lock Account if Failed Attempts > 3 ○ Display Welcome Message ○ Logout	14	

	Description	Mark	Value
	4. Decision Nodes and Condition Logic (3 points) • Use diamond-shaped decision nodes to represent branching points. • Clearly label conditions on outgoing arrows, e.g., ◦ [Validation Successful] ◦ [Validation Failed] ◦ [Attempts > 3] • Ensure logical branching and merging where applicable. 5. Swimlanes and Role Division (3 points) • Use swimlanes to separate roles/actors (e.g., User and System). • Assign activities to the correct swimlane to clarify responsibility. • Example: User inputs credentials in User swimlane; system validates in System swimlane. 6. Diagram Quality and Formatting (3 points) • Use consistent shapes and symbols throughout. • Avoid crossing lines where possible; maintain clarity. • Align elements neatly and keep the diagram visually balanced. • Use proper font sizes and styles for readability.		
(2)	Activity Diagram for Account Registration 1. Filename Correctness (1 point) • Ensure the filename matches the content and theme, e.g., LoginLogout_ActivityDiagram.vsd. • Follow the naming conventions specified by the project or instructor.	14	

2. Start and End Nodes (2 points)

- The **Start Node** should be a solid black circle (●).
- The **End Node** should be a circle with a black dot inside (⦿).
- Confirm that there is exactly one start node and at least one end node clearly shown.

3. Activities and Control Flows (2 points)

- Each activity (action) should be clearly labeled and logically placed.
- Use arrows to correctly connect activities in the sequence of flow.
- Example activities:
 - Enter Username and Password
 - Validate Credentials
 - Display Error Message
 - Lock Account if Failed Attempts > 3
 - Display Welcome Message
 - Logout

4. Decision Nodes and Condition Logic (3 points)

- Use diamond-shaped decision nodes to represent branching points.
- Clearly label conditions on outgoing arrows, e.g.,
 - [Validation Successful]
 - [Validation Failed]
 - [Attempts > 3]
- Ensure logical branching and merging where applicable.

5. Swimlanes and Role Division (3 points)

- Use swimlanes to separate roles/actors (e.g., **User** and **System**).

	Description	Mark	Value
	- Assign activities to the correct swimlane to clarify responsibility. - Example: User inputs credentials in User swimlane; system validates in System swimlane. 6. Diagram Quality and Formatting (3 points) - Use consistent shapes and symbols throughout. - Avoid crossing lines where possible; maintain clarity. - Align elements neatly and keep the diagram visually balanced. - Use proper font sizes and styles for readability.		
(3)	Activity Diagram for Vehicle Query 1. Filename Correctness (1 point) - Ensure the filename matches the content and theme, e.g., LoginLogout_ActivityDiagram.vsd. - Follow the naming conventions specified by the project or instructor. 2. Start and End Nodes (2 points) - The Start Node should be a solid black circle (●). - The End Node should be a circle with a black dot inside (●). - Confirm that there is exactly one start node and at least one end node clearly shown. 3. Activities and Control Flows (2 points) - Each activity (action) should be clearly labeled and logically placed. - Use arrows to correctly connect activities in the sequence of flow.	14
